

TB Wildlife Reservoirs: Are badgers really different?

**Bovine Tuberculosis Workshop
University of Glasgow
9th -10th May 2013**

TB Wildlife Reservoirs

- 
- What makes a good wildlife reservoir?
 - TB in Other UK Wildlife
 - Possible Suspects
 - Are badgers really different?

TB Wildlife Reservoirs

Field Vole

Fox

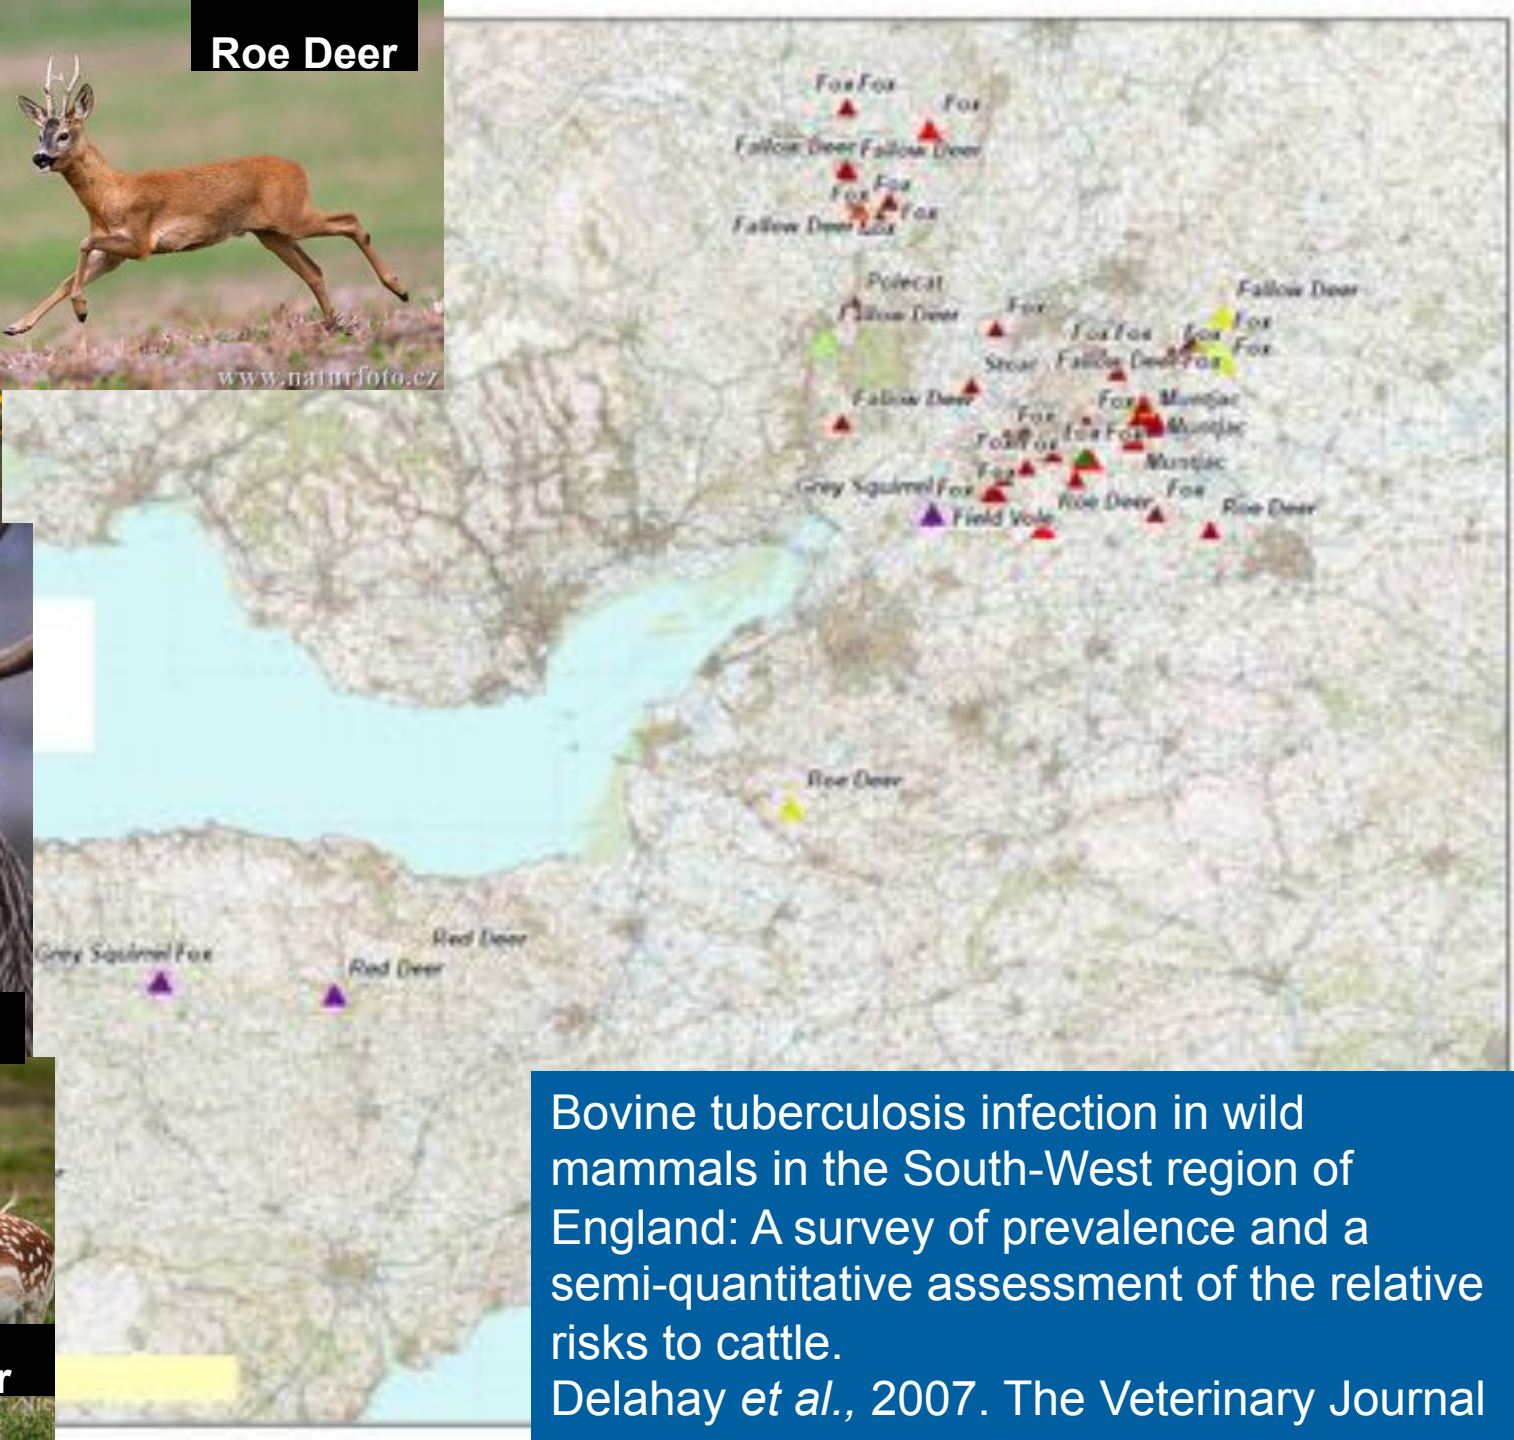

Red deer

Fallow Deer

Roe Deer

Bovine tuberculosis infection in wild mammals in the South-West region of England: A survey of prevalence and a semi-quantitative assessment of the relative risks to cattle.
 Delahay *et al.*, 2007. *The Veterinary Journal*

Yellow necked mouse

Grey squirrel

Muntjac

Wood mouse

Stoat

Common shrew

Polecat

Bovine tuberculosis infection in wild mammals in the South-West region of England: A survey of prevalence and a semi-quantitative assessment of the relative risks to cattle.

Possible Suspects

TB Wildlife Reservoirs

- ✓ Contact with cattle possible
- ✓ Contact with badgers possible
- ✓ Disease present
- ✓ Very widespread
- ✗ Gross pathology rarely detected
- ✗ Prevalence low **2.04 - 4.69%**
- ✗ Low likelihood of excretion

TB Wildlife Reservoirs

30.28 inHg ↑ 13°C 06/18/09 10:19 PM CCF 6

- ✓ Contact with cattle possible
- ✓ Contact with badgers possible
- ✓ Pathogen present
- ✓ Very widespread
- ✗ Gross pathology rarely detected
- ✗ Prevalence low **2.04 - 4.69%**
- ✗ Low likelihood of excretion

TB Wildlife Reservoirs

RED DEER
(*CERVUS ELAPHUS*)

RED DEER
(*CERVUS ELAPHUS*)

- ✓ Extensive Pathology
- ✓ Potential to shed large bacterial load
- ✓ Chronic Infection
- ✓ Long lived (10-15 years)
- ✗ Low Prevalence **0.12 – 3.64%**
- ✗ Patchy distribution

ROE DEER
(*CAPREOLUS CAPREOLUS*)

ROE DEER
(*CAPREOLUS CAPREOLUS*)

- ✓ Extensive Pathology –generalised widespread infection
- ✓ Potential to shed comparable bacterial load
- ✓ Widespread and common
- ✓ May feed in open farmland / farm visits
- ✓ Chronic Infection observed
- ✓ Long lived
- ✗ TB Prevalence **0.47 – 1.92%**
- ✗ Less gregarious

ROE DEER
(*CAPREOLUS CAPREOLUS*)

ROE DEER
(*CAPREOLUS CAPREOLUS*)

- ✓ Extensive Pathology – generalised widespread infection
- ✓ Potential to shed comparable bacterial load
- ✓ Widespread and common
- ✓ May feed in open farmland / farm visits
- ✓ Chronic Infection observed
- ✓ Long lived
- ✗ TB Prevalence **0.47 – 1.92%**
- ✗ Less gregarious

TB Wildlife Reservoirs

- ✓ Extensive Pathology –generalised widespread infection
- ✓ Potential to shed excrete similar bacterial load to badgers
- ✓ May feed close to open farmland
- ✓ TB Prevalence **2.67 – 6.53%**
- ✓ Chronic Infection observed
- ✓ Long lived
- ✗ Widespread but patchy distribution

TB Wildlife Reservoirs

MUNTJAC
(MUNTIACUS REEVESI)

MUNTJAC
(MUNTIACUS REEVESI)

- ✓ TB Prevalence **1.08 – 14.38%**
- ✓ Chronic Infection observed
- ✗ Widespread but clumped distribution
- ✗ Little evidence of generalised widespread infection
- ✗ Likelihood of contact with cattle lower than other deer species
- ✗ Likelihood of excretion lower than other deer species
- ✗ Generally solitary

TB Wildlife Reservoirs

Muntjac
(you might have to take our
word for it...)

MUNTJAC
(MUNTIACUS REEVESI)

MUNTJAC
(MUNTIACUS REEVESI)

- ✓ TB Prevalence **1.08 – 14.38%**
- ✓ Chronic Infection observed
- ✗ Widespread but clumped distribution
- ✗ Little evidence of generalised widespread infection
- ✗ Likelihood of contact with cattle lower than other deer species
- ✗ Likelihood of excretion lower than other deer species
- ✗ Generally solitary

TB Wildlife Reservoirs

Bovine TB found in wild boar for first time in UK
Scientists discover TB in wild boar, raising fears among farmers that boars and badgers could be contributing to disease in cattle

- ✓ Pathology –high proportion with generalised lesions(Spain)
- ? Contact opportunities with cattle
- ✓ TB Prevalence (Spain **46-62%** but much higher densities)
- ? Chronic Infection
- ✓ Aggregations between individuals

TB Wildlife Reservoirs

BADGER
(MELES MELES)

BADGER
(MELES MELES)

- ✓ TB Prevalence **9.76 - 12.21%**
- ✓ Long lived with disease
- ✓ Infection may be linked to increased ranging behaviour
- ✓ Widespread
- ✓ Excrete *M.bovis* effectively through multiple routes
- ✓ Lots of shared space with cattle; pasture & farm buildings
- ✗ Social animals, barrier or facilitator?

BADGER
(MELES MELES)

BADGER
(MELES MELES)

- ✓ TB Prevalence **9.76 - 12.21%**
- ✓ Long lived with disease
- ✓ Infection may be linked to increased ranging behaviour
- ✓ Widespread
- ✓ Excrete *M.bovis* effectively through multiple routes
- ✓ Lots of shared space with cattle; pasture & farm buildings
- ✗ Social animals, barrier or facilitator?

- Risk from deer species (esp fallow and red) potentially substantial, where abundant
- Wide variation in deer densities, localised risk

‘The role of some deer species in the epidemiology of TB in cattle may become more significant in parts of the UK if deer populations continue to expand in geographical range and abundance’ (Ward et al. 2009)

- High levels of uncertainty – are deer a maintenance reservoir? Future role of wild boar?
- Badgers tick lots of the boxes!
- But dynamic epidemiological picture....
